PROFILE

IT technologist with a focus on backend development, API design and software design. I work in a structured and analytical way and have experience with C#/.NET, REST APIs and SQL databases from internships, projects and Specialisterne Academy. I learn new technologies quickly, write maintainable code and enjoy solving technical problems.

CORE SKILLS

- Backend development in C# and .NET
- REST API development and Swagger documentation
- SQL database design and integration (SQL Server)
- Object-oriented programming and software design
- Testing, debugging and quality assurance
- Git/GitHub and version control
- Agile ways of working and sprint-based development
- Cross-functional teamwork and customer service

Personal strengths: conflict resolution, strong work ethic and a sense of responsibility.

EXPERIENCE

Intern, IT – Software and programming

January – April 2025

Diviso – Digital Visual Solutions, Viborg

- Developed and implemented a full-stack system consisting of a Windows Forms-based URL display, a Blazor Server back office and a REST API with SQL integration.
- Worked with C#/.NET, API design and Swagger documentation, and SQL database integration.
- Handled debugging, testing and documentation, and version-controlled the work in GitHub.

OTHER EXPERIENCE

Substitute, home care

July 2026 – present

Svanepleje ApS, Kjellerup

Healthcare assistant

June 2023 – May 2025

Pleje- og Omsorgscenter (care centre), Viborg

Service assistant

February 2020 – October 2022

Løvbjerg, Viborg

I have visited clients in their homes in home care, handled medication and personal care, and worked with customer service and cash handling. These jobs have strengthened my ability to take responsibility, work independently, collaborate in teams and solve problems under time pressure.

PROJECTS

PDF Downloader

Specialisterne project · GitHub

C#/.NET app with both a CLI and a WPF GUI that reads report metadata from an Excel file and downloads the matching PDFs. Includes retries, fallback URLs, a status report and GitHub Actions for build and tests.

C# .NET WPF ClosedXML GitHub Actions

View the code on GitHub →

Blackjack

Console game · GitHub

Blackjack in C# with clean architecture: domain logic, console UI and tests are separated, and the game is covered by MSTest unit tests and code coverage.

C# .NET MSTest Clean architecture

View the code on GitHub →

COBOL projects

Training projects in GnuCOBOL · GitHub

A set of COBOL programs covering file processing, account statements, transaction statistics and an AML matching system that checks customers against a sanction list.

COBOL GnuCOBOL File processing

View the code on GitHub →

Self-hosted audiobook server (Audiobookshelf)

Personal project · October 2026

Set up a server in Docker with Docker Compose and persistent data storage via volumes. Gave access from several devices via Tailscale and troubleshot network and firewall issues in Windows.

Docker Docker Compose Tailscale Networking

Backend development on boot.dev

In progress · Started October 2026

Learning backend development through boot.dev's hands-on courses and exercises, and building on what I learn as I go.

Backend Learning

View my boot.dev profile →

EDUCATION

IT technologist

September 2023 – June 2025

Erhvervsakademi Dania, Viborg – final grade 12 (Danish scale)

- Focus on software development in Python and C++, Blazor and web development, embedded systems and IoT, networking and CyberSec, and project management and system design.
- Developed an automated irrigation system (Seluxit), a VPN solution (Thise Mejeri) and a full-stack internship project (Diviso).

IT specialisation programme

January – April 2026

Specialisterne Academy, Aarhus

- 12-week intensive programme in backend development, software architecture and design patterns, testing and quality assurance, sprint-based project work and technical documentation.
- Worked on C# full-stack projects and COBOL/mainframe-related development.

Bioscience STX

August 2020 – June 2023

Viborg Gymnasium, Viborg
